

AMENDMENTS TO THE SPECIFICATION

Please amend the specification at paragraph 133 of the published application as follows:

The rotation termination detecting unit 90 is disposed below the driven gear SG and includes first and second fixed terminals 92 and 92' installed to be spaced-apart at an interval of 180° ^{[[i]]} and a rotation terminal 94 installed below the first and second fixed terminals 92 and 92' to be coupled to one of the first and second fixed terminals 92 and 92'.
